Activity E: Starting a New Project with Vue

Prerequisites

Again, the students need to install `npm` and the Vue-cli to continue. How to do this was outlined in the previous section.

Scenario

Starting a new project with Vue.

Aim

To create a new project to start working with Vue and `npm`.

Steps for Completion

Go through the following steps to create a new Vue project:

1. Open the command prompt and create a new directory, using this code:

```
mkdir learning-vue; cd learning-vue
```

2. Create a new project with `vue init simple`.
3. Answer the questions that the program asks you (default answers are OK).
4. Done. You can list directory files by typing `ls`.

This activity demonstrates how easy it is to scaffold a new Vue project.
